(54) MULTI-LAYER PRINTED CIRCUIT BOARD

(57)Abstract:

PROBLEM TO BE SOLVED: To make a signal line shielded surely by a ground layer from electromagnetic waves, by separating a mounted pad connected to the signal layer into a plurality of sections by a pattern layer that includes a mounting pad connected to the ground layer.

SOLUTION: A ground layer 6 and a signal layer 2 are laminated with an insulating layer in between on a board 1. A mounting pad connected to a ground layer 6 and a mounting pad connected to the signal layer 2 are formed on the face of laminated layer. In this case, the mounting pad is connected through a via hole 4 to the ground layer, and at the same time a soldered body is preferably formed at the mounting pad that is located at the via hole 4. The other mounting pad is connected to the signal layer 2 through the via hole 4, and a soldered body is preferably formed at the mounting pad located at the via hole 4.
